RF CMOS USB Wireless Camera

Grand RF CMOS USB is a wireless audio & video transmitter and receiver with a 1/3" color CMOS video camera and a microphone integrated into the transmitter. It includes a stand that can be mounted on the wall or ceiling. Grand RF CMOS USB can deliver images and audio at 100 meters in open area (30 meters through walls and floors). With the video capture function, it can capture both still & full motion video (.bmp & .jpg file). It is the bridge between your analog video source (VCR, analog camera, camcorder) and your computer. The hardware CAPTURE let you capture the image instantly. The Grand RF CMOS USB is not only ideal for home security, room and child monitoring. It also can be apply to video capture, image capture, video conference and just for fun.
